

1 Authors' Note

Below are some of the relevant references that are a part of our research and will be a part of Patrick Pragman's thesis ultimately. If you're interested in the Elodea problem, look for work by Tobias Schwoerer, for comparative work on classification models, check out Jamie Sykes' thesis. The text by Steve Brunton is an excellent primer on the use of machine learning and other tools for solving cross-disciplinary problems in the sciences.
